

What could the future of digital healthcare look like for a consumer?

Video transcript

Nikau, a Maori male in his mid 20s, talks to viewer, he is on a break from his labouring job

Nikau (to camera)

Kiaora, I'm Nikau and I've just been diagnosed with Type 1 Diabetes. My doc thinks this is a really big deal, but I'm not too worried cos I've got all these cool technologies to help me out.

Cutaway to image of implanted monitoring device in arm and AI assistant speaks from his watch as he continues talking – speech bubble “Nikau you should be having your sandwich now”

Nikau v/o

I've got a device in my arm that's always checking my blood sugar levels and giving me insulin as I need it. If the levels drop, my AI assistant Andy tells me he's adjusting the levels and reminds me what to eat.

Cutaway to image of app on a smartphone (paper thin device) showing online health record – images of other health professionals linking into or viewing this info as well

Nikau v/o

I can see all my readings in this sweet app on my smartphone, along with all my other medical info. It really helps me understand how I manage my diabetes and it's good to know my docs and nurses can see it too cos I live pretty far away from a hospital.

Nikau (to camera)

I can even check who's been looking at my info online.

Cutaway to image of Nikau with streamlined looking virtual reality glasses on, with image showing what he can see which is his specialist in a hospital room

Nikau v/o

Yesterday I had a virtual appointment with my specialist. She said her AI assistant had been checking me out online and I'm doin real well so far, but I need to stop smoking, its pretty hard to hide things from your docs these days!
